General Information for Participants

*** Information and Registration**

The Registration and Information Desk will be situated at the **Osaka International House Foundation** on the **2F** during the following time:

08:00-17:30 March 23, 2015

08:30-17:00 March 24, 2015

Organizer

Higher Education Forum (HEF)

Tel: + 886 2 2740 1498 | www.prohef.org

*** Presentations and Equipment**

All presentation rooms are equipped with a screen, an LCD projector, and a laptop computer installed with Microsoft PowerPoint. You will be able to insert your USB flash drive into the computer and double check your file in PowerPoint. We recommend that you bring two copies the file in case of one fails. You may also link your own laptop to the provided projector, however please ensure you have the requisite connector.

*** A Polite Request to All Participants**

Participants are requested to arrive in a timely fashion for all addresses, whether to their own, or to those of other presenters. Presenters are reminded that the time slots should be divided fairly and equally between the number of presentations, and that they should not overrun. The session chair is asked to assume this timekeeping role and summarize clarify key important issues in each topic.

Osaka International House Foundation is a public-service corporation founded by Osaka City with permission from the Ministry of Foreign Affairs, with the purpose of contributing to the internationalization of Japan. Based in Osaka, International House, Osaka (i-house) acts as a focal point for international exchange activities within the Kansai Region. By exploring the history, culture and other local aspects of Japan and other countries the Foundation strives to help foster a mutual understanding and friendship between citizens, and deepen relationships between Japan and other countries of the world.

Topic: “Applications of Hybrid-Artificial Neural Network in Geotechnical Engineering”

Ramli Nazir, PhD, P. Eng (Mal),

Professor of Geotechnical Engineering

Faculty of Civil Engineering, Universiti Teknologi Malaysia

Abstract

Geotechnical engineers face many uncertainties in relation with their design works. This is due to the non-homogeneity of the soil materials that they are dealing with. Recently several studies have proved that feasibility of artificial neural network (ANN) in solving different geotechnical problems. It is well established that ANN as a function approximation tool that tries to find a nonlinear relationships between parameters can be implemented for estimating several soil properties, including the compression index, shear strength, permeability, soil compaction, lateral earth pressure, and others. However, over the last few years, some researchers addressed ANN deficiency in finding global minima and slow rate of learning. Alternatively, to improve the ANN prediction power, they suggested the use of hybrid ANN which combines global search algorithms such as particle swarm optimization (PSO) and genetic algorithm (GA) with conventional ANN. The main objective of this paper is to provide a general view of hybrid ANN application in geotechnical engineering. The paper is not intended to provide details of ANN modelling procedure, but rather, for brevity purpose, it tries to cover a number of hybrid-ANN application in predicting the bearing capacity and settlement of both deep and shallow foundations. The paper suggest the prediction performance of hybrid-ANN is better than that of conventional ANN. It recommends the hybrid ANN implementation, as a more reliable, economic and quick tool, in solving geotechnical problems more specifically when the contact nature between parameters is unknown and complex. Results base from the author's works indicate that the pile bearing capacities predicted by GA-based ANN are in close agreement with measured bearing capacities. Coefficient of determination as well as mean square error equal to 0.990 and 0.002 for testing datasets respectively. The model performance using PSO-based ANN model also

shows a close agreement between the measured bearing capacities for shallow foundation based on the coefficient of determination value. The determination values equal to 0.997 and 0.991 for training and testing datasets respectively. While using a Back Propagation techniques shows that ANN is a powerful and accurate tool in predicting the bearing capacity of spread foundations. The coefficient of determination equals to 0.99 suggests that the predicted bearing capacity by ANN model is in close agreement to the measured bearing capacity. The results conclude that the Hybrid ANN model serves as a reliable and simple predictive tool to appropriately consider various essential parameters for predicting the bearing capacity of either shallow or deep foundations.

Topic:

" Riding the Burnout Wave (even further!): A Sociological Approach to Understanding and Tackling Burnout "

Associate Professor

Adriana E. Edwards Wurzinger

Affiliation: Saitama University,

Center for English Education & Development (CEED)

Japan, Saitama Prefecture, Saitama City

Outline:

In response to the very positive feedback and questions received from attendees and colleagues, I will be taking up the issue of "burnout" once again, and try to further our discussion to reach new depths together.

Nobody is completely free from the effects of stress. No news there.

There is nothing wrong with the exhilarating feeling of being challenged, with the adrenaline that a limited amount of stress (the kind you can keep under control) can bring to our professional lives, but how much is enough? Where is the thin line between positive, creativity-fostering stress, and simple, straightforward burnout?

During this presentation, we will uncover and discuss the elements of burnout using sociological principles, aiming at creating a scaffolding of strategies that would allow the participants to put together their very own "survival kit".

Be prepared to participate! This will be the kind of talk where you'll have to walk the walk!

Topic: "Getting to the Core: Reconsidering Identity and its Layers to Promote Creativity"

Associate Professor

Adriana E. Edwards Wurzinger

Affiliation: Saitama University,

Center for English Education & Development (CEED)

Japan, Saitama Prefecture, Saitama City

We normally understand our Identity as our anchor, our stronghold, our firm answer in times of doubt and struggle. What if, just for a few minutes, just for today, we could fully engage in a challenging exercise that would rattle our Identity “cages” and open up a very different view?

This tutorial session will take us on a journey towards a better, more comprehensive and honest look at how our individual and collective sense of Identity operates. We will build our answers together, explore our questions and issues, identify the reasons why we do not feel comfortable with change (and why we should or shouldn’t!), and put together the pieces of a puzzle that is as exciting as it is terrifying: a real Sense of You.
